

# Sennheiser™ Audioport A 200

## Personal Sound Amplifier

The lightweight stethoset headphones are like “reading glasses for your ears”. Two close-to-the-ear microphones transmit voices and sounds in stereo to allow natural spatial listening. Ideal for those who are moderately hearing impaired, without hearing aids, who need amplification.

### FEATURES

- Adjustable volume to individually suit every listening situation.
- Optimum speech quality.
- Very easy to use.
- 12 hours of use with rechargeable accupack.
- Extremely lightweight, therefore very comfortable to wear.

***Allows for nursing staff to talk to residents through the microphones. These in-built microphones provide amplified sound and there is no longer a need to raise your voice as each unit has individual volume control.***

***Can be used to listen to the television or radio when in close proximity and the individual volume control reduces the need for loud volumes.***
