

# The Bellman Visit™ Smoke Alarm

The Bellman Visit™ system helps people in difficult listening situations. The Smoke Alarm transmitter is activated by the presence of smoke in the event of a fire, transmitting a signal to the various Bellman Visit™ receivers, such as the Visit Flash, which alerts the user by clear sound and light, and the Visit Bedshaker which alerts by vibrating.

## FEATURES

- **Easy to install** - simply connect the flash to a power point and fit one or more smoke alarms to the ceiling.
- **Portable** - battery backup allows for wire less operation of the Flash for up to 3 days.
- **Dual Signals** - provides an alert with a strobe light and vibrating pad for night safety. The Flash and Bed Shaker will respond as long as the Smoke Alarm is activated.
- **Good Range** - range between the Flash and the Smoke Alarm may be up to 30 metres subject to structural conditions. Thick walls will decrease the range.
- **Easy Testing** - a test button on the alarm will give you peace of mind and a low battery indicator will alert you when to replace the battery.
