

PRINTACALL Home Room Loop Systems

for hearing impaired people

A PRINTACALL HOME ROOM LOOP SYSTEM BRINGS THE SOUND TO YOU.

A home room loop enables a person wearing a hearing aid with a T switch to access the sound from a TV, radio or other equipment via the loop amplifier. The loop minimises distracting background noise from within the room and from outside.

The volume of sound from the TV or radio through the room loop to the user is at a more natural level. The whole family can enjoy the sounds of entertainment without uncomfortable noise levels.

FREE TO MOVE AROUND THE ROOM WITHIN THE LOOP.

The user of the room loop is free to move anywhere within the looped room and enjoy the sounds at their individual volume level, without interfering with other people.

HOW DO WE INSTALL THE ROOM LOOP?

We install a loop amplifier and run a cable around the room selected by you and connect the loop cable to the amplifier. A microphone is placed on the speaker grille of the TV or radio or connected direct to the equipment by a suitable connector if available. A portable microphone can also be used by the hearing impaired person within the loop area to pick up sound.

In most situations, we run the loop cable around the room under the floor. Installation is neat and efficient.

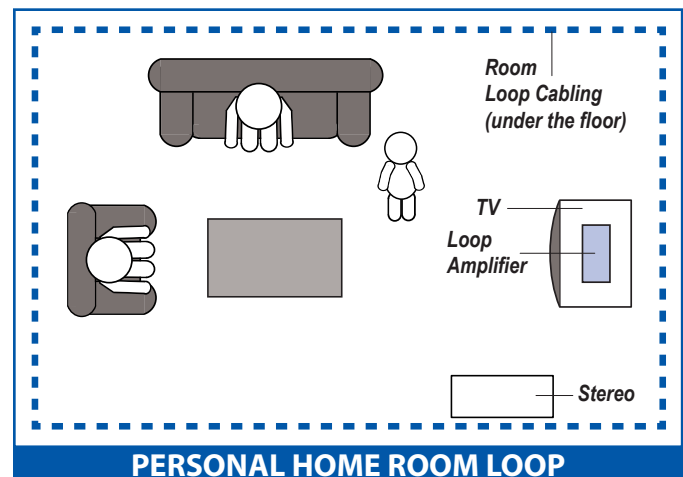

WHERE IS THE LOOP AMPLIFIER?

The loop amplifier, which is relatively small in physical size, does not require adjustment by the user once installed. It will sit on top of the TV or radio and is easy to operate and attractive in appearance. The user will make the necessary adjustments for clarity of sound and volume through their hearing aid.

ACT NOW! HEAR THE DIFFERENCE.
Contact our Customer Service Desk for further information on (02) 9809 2392.

At the time of installation, a Printacall technician will advise you of the best method of installation relative to your chosen location. Printacall is a specialist in audio induction loop systems and has installed over 500 loop systems into major public buildings in New South Wales and the ACT.
